DETAILED ACTION

Allowable Subject Matter

1. Claims 11, 16 and 20 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
2. The following is a statement of reasons for the indication of allowable subject matter: Prior art failed to establish the required concurrent formation of the insulating films.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
4. Claims 1-10, 12, 14, 15, 18 and 19 rejected under 35 U.S.C. 103(a) as being unpatentable over Kataoka et al. (6,266,111) further in view of Rho et al. (6,057,896).

Regarding Claims 1-10, 12, 14, 15, 18 and 19, Kataoka et al. disclose a diffuse reflection plate, manufacturing method thereof and reflection-type display device where in Fig. 5, pixel formation area is formed on the right half section and the thin film transistor formation area is formed on the left half. Pixel formation area includes prism shaped base structures 11, covered by uneven layer/resin 12. Thin film transistor formation area includes thin film transistors 51. Kataoka et al. fail to disclose the required passivation layer and the organic layer. However, Rho et al. disclose liquid crystal displays using

organic insulating material for a passivation layer and/or a gate insulating layer and manufacturing methods thereof where in Fig. 3, pasivation layer 100 and the organic layer 110 are disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required passivation and the organic layers in Kataoka et al. as taught by Rho et al. in order to have a liquid crystal display device with higher reliability.
